

Soumyodipta Majumdar

Software Engineer | Data & BI Analyst

<https://soumyodiptam.github.io> | Liverpool, United Kingdom | 19soumyo@gmail.com | [LinkedIn](#)

Technical Skills

Analytics & Business Intelligence: Power BI, DAX, Power Query, KPI Reporting, Dashboard Development, Data Visualisation, Performance Analysis, Statistical Analysis

Data & Automation: SQL, Python (Pandas, NumPy), ETL, Data Validation, Data Quality, Data Cleaning, Reporting Automation, Data Modelling

Software Engineering: Node.js, Django, REST APIs, JavaScript, TypeScript, Java

Tools & Platforms: Git, Jenkins, SharePoint, MongoDB, Postman, Excel, Jupyter Notebook, QGIS

Delivery & Collaboration: Stakeholder Engagement, Requirements Gathering, Agile Delivery, Process Improvement, Cross-Functional Collaboration

Relevant Experience

Independent STEM Mentor

Remote | December 2024 – Present

- Improved student performance by 20–30% through targeted interventions informed by assessment data and progress tracking.
- Identified recurring knowledge gaps by analysing performance trends and adapting teaching strategies accordingly.
- Simplified complex mathematical and technical concepts for learners with varying levels of confidence and ability.

Graduate Data Analyst | Serco

Liverpool, United Kingdom | February 2024 – September 2024

- Turned operational data into actionable reporting that provided stakeholders with clearer visibility of performance trends and service delivery metrics.
- Built and maintained Power BI dashboards that improved access to business-critical information and reduced reliance on manual reporting.
- Investigated data quality issues, reconciled reporting discrepancies and strengthened confidence in analytical outputs.
- Maintained reporting documentation, governance standards and SharePoint processes to support consistent decision-making.

Data and Technology Graduate | Greggs PLC

Liverpool, United Kingdom | February 2022 – January 2024

- Developed Power BI dashboards tracking sales and operational KPIs, contributing to a 71% improvement in sales outcomes through enhanced performance visibility.
- Used SQL and Python to analyse operational data, uncover trends and identify opportunities for business improvement.
- Partnered with stakeholders across multiple business functions to refine reporting requirements and deliver actionable insights.
- Improved reporting accuracy through structured data validation, cleansing and quality assurance processes.
- Produced analysis that supported operational decision-making and performance monitoring across the organisation.

Full Stack Engineer | Capgemini

Pune, India | June 2018 – September 2020

- Built and enhanced backend services and REST APIs supporting customer-facing applications, helping reduce issue resolution times by 35%.
- Streamlined reporting workflows by automating daily customer data processes through Python-based automation scripts.
- Improved software delivery reliability by collaborating within Agile engineering teams using Git version control and CI/CD practices.
- Contributed to scalable web application development by supporting backend integration, API development, and TypeScript-based engineering workflows.

Education

M.Sc. Advanced Computer Science | University of Liverpool

Liverpool, UK | 2020 – 2022

B.Tech. Information Technology | WBUT

India | 2014 – 2018
